SUSTAINABILITY**

Our Commitment to Sustainable Freight Solutions

At Danone North America, making our nutritious, high-quality products accessible nationwide is part of our mission to bring health through food to as many people as possible. We balance this mission with our global parent company's [commitment to be carbon neutral by 2050](#) by continuously improving the sustainability of the network of partners we rely on to deliver our products. From piloting new equipment like hybrid electric technology that enables engines of vehicles to stop running when not in motion, to optimizing our network and load size and holding our strategic carriers to annual fuel efficiency targets, we are always seeking more sustainable ways to deliver our products to store shelves.

As the largest Certified B Corporation® in the world, we are committed to balancing purpose and profit. We consider the impact of our decisions on our workers, customers, suppliers, community and the environment. To ensure we are living out our commitment, Danone North America is proud to join other industry leaders in endorsing the [BSR Sustainable Fuel Buyers' Principles](#). These principles provide a roadmap for freight carriers seeking to transition to sustainable, low-carbon fuel and transportation technology. We commit to promoting these principles of collaboration and innovation among our transportation partners, and making them a requirement for future partnerships, as one more way to reduce our collective carbon footprint with the overarching intention to continue driving a global movement to use business as a force for good.
